

# Internal Proposal: Project Management & Team Operations Platform

## 1. Objective

We propose building a centralized, role-based Project Management Platform to manage projects, clients, milestones, tasks, team workload, time tracking, releases, invoices, and project profitability from one system.

The platform will improve visibility, accountability, project tracking, and internal team coordination while ensuring sensitive financial information is accessible only to authorised users.

## 2. Role-Based Access

### Admin

Full access to the entire platform, including:

- All projects
- Clients
- Teams and users
- Tasks and milestones
- Time tracking
- Releases
- Invoices
- Project budgets
- Received and pending payments
- Reports
- User roles and permissions

### Project Manager (PM)

Full operational access to projects and teams, including:

- Project management
- Client information
- Task and milestone management

- Team assignment
- Time tracking
- Releases
- Project reports
- Invoices and financial information

## **Team Lead (TL)**

Access to:

- Assigned projects
- Team tasks
- Milestones
- Releases
- Team Todo
- Timers
- Task creation and assignment as permitted

Financial information, invoices, and payment data will not be visible.

## **Team Member**

Access to:

- Assigned projects
- Assigned tasks
- Milestones
- Releases
- Todo
- Timers
- Daily status
- Project status
- File attachments

Team members will not have access to budgets, invoices, payments, or other financial information.

# 3. Dashboard

The dashboard will provide a high-level overview of company-wide project operations.

## Project Summary

- Total Projects
- Active Projects
- On-Hold Projects
- Maintenance Projects

## Team Todo Overview

A table showing the Todo of all team members.

Example:

### Test Name

- Task 1 (*Project Name — Estimated Time*)
- Task 2 (*Project Name — Estimated Time*)

This will allow management to quickly understand what each team member is currently expected to work on.

## Release Sheet

A table below the Todo section showing:

- Project Name
- Department
- Team Member
- Release Details
- Release Date
- Status

# 4. All Projects

The All Projects section will display all projects in a structured table.

## Project Information

- Project Name
- Pending Task Hours
- Number of Active Team Members
- Release Date
- Total Budget
- Received Amount
- Pending Amount
- Project Progress

## **Project Progress**

Project progress will be calculated based on:

### **Estimated Task Hours vs. Actual Used/Logged Hours**

The project financial information, including budget, received amount, and pending amount, will be visible only to **Admin and PM** users.

# **5. Client Management**

Before creating a project, the client must be created.

## **Client Information**

- Client Name
- Email
- Address
- Contact Number
- Country
- Company Name
- Client Source:
  - Upwork
  - Direct
- Project Billing Type:
  - Hourly

- Fixed

## 6. Project Creation

A project can be created after selecting an existing client.

### Project Details

- Project Name
- Select Client
- Total Budget
- Project Description
- Project Type
- Project Status

Once the project is created, the following sections will be available:

- Overview
- Reports
- Tasks
- Milestones
- Team
- Releases
- Invoices

## 7. Milestone Management

A milestone must be created before tasks can be added to a project.

### Milestone Details

- Milestone Title
- Estimated Hours
- Start Date
- End Date

- Status

### **Milestone Status**

- Not Started
- In Progress
- On Hold
- Completed
- Cancelled

### **Milestone Hour Control**

The system will prevent additional tasks from being added when:

**Total Estimated Task Hours = Milestone Estimated Hours**

This will help prevent over-allocation of work beyond the planned milestone capacity.

## **8. Task Management**

Tasks will be created under a specific milestone.

### **Task Details**

- Task Title
- Description
- Department:
  - Design
  - Development
  - SEO
- Select Milestone
- Estimated Time
- Start Date
- End Date
- Assigned User
- Attachments

## Task Assignment Flow

1. The task is initially created in **Assigned** status.
2. The task is assigned to the TL or manager responsible for creating the task.
3. The TL/Manager assigns the task to the appropriate team member.
4. The task becomes visible in the team member's task list.

## Task List View

Each task will display:

- Task Title
- Assigned To
- Department
- Start Date
- End Date
- Task Status

# 9. Task Timer & Time Tracking

Team members will be able to start a timer while working on an assigned task.

## Workflow

**Assigned → In Progress → In Review → Completed**

When the team member starts working:

- The timer starts.
- The task status changes to **In Progress**.

When the task is completed:

- The team member changes the status to **In Review**.
- The system displays the total logged time.
- The team member adds a task completion/status update.
- The TL or PM reviews the task.

Time tracking will be used to calculate:

- Task progress
- Milestone progress
- Project progress
- Pending task hours
- Team productivity

## 10. Milestone List

The milestone list will display:

- Milestone Title
- Estimated Hours
- Spent Hours
- Start Date
- End Date
- Milestone Status

The system will automatically calculate spent hours based on the time logged against milestone tasks.

## 11. Team Todo

A dedicated Team Todo section will allow users to manage their daily and project-related work.

The system will display:

- Team Member
- Todo
- Related Project
- Estimated Time
- Status
- Due Date

This will provide a centralized view of all ongoing team activities.

## 12. Team Time Tracking

A dedicated time tracking section will show:

- Team Member
- Project
- Task
- Timer Status
- Start Time
- End Time
- Total Logged Time

This will allow management and PMs to monitor active work and time allocation across projects.

## 13. Releases

The platform will include a centralized Release Management section for all projects.

Release information can include:

- Project Name
- Department
- Team Member
- Release Details
- Release Date
- Status
- Related Files

Releases will also be visible within the individual project.

## 14. Invoices & Financial Management

The platform will include invoice management for projects.

### **Financial Information**

- Total Project Budget
- Received Amount
- Pending Amount
- Invoice Status
- Payment Details

Financial data will be restricted to:

- Admin
- Project Manager

Team Leads and Team Members will not have access to project payment or invoice information.

## 15. User Profile & Status Updates

Each user profile will include:

### **Daily Status**

Users can submit daily updates about:

- Work completed
- Current work
- Blockers
- Next priorities

### **Project Status**

Users can provide updates related to individual projects.

This will improve transparency and help PMs identify blockers early.

## 16. File & Attachment Management

Files can be attached to:

- Projects
- Milestones
- Tasks

- Releases

Every uploaded file will display:

- File Name
- Uploaded By
- Upload Date
- Related Project/Task

This will ensure clear ownership and easy access to project documentation.

## 17. Core System Workflow

**Client**

**Project**

**Milestone**

**Task**

**Team Assignment**

**Timer & Time Tracking**

**Task Review**

**Milestone Progress**

## **Project Progress**

## **Release & Reporting**

# **18. Expected Business Benefits**

The platform will provide:

- Centralized project management
- Complete visibility of team workload
- Accurate project progress tracking
- Real-time time tracking
- Better milestone control
- Clear task ownership
- Improved release management
- Secure financial data access
- Reduced manual tracking
- Better accountability across departments
- Improved project profitability monitoring

## **Conclusion**

The proposed Project Management Platform will act as a centralized internal operating system for managing the complete project lifecycle—from client onboarding and project creation to task assignment, time tracking, milestone progress, releases, reporting, and payments.

The platform will be built around a strong role-based access system to ensure that every user sees only the information relevant to their responsibilities while Admins and PMs maintain complete operational visibility.
